

# How to install Social Invite for Sngine

This guide is fast and simple tutorial, should take you 5 minutes

**If you are updating, please save your API Key and follow the new files structure and delete the old files, I changed it for better organization**

## Step 1: Upload Files

---

I am assuming you that by this point you already know how to create and or already have a facebook app

Upload all files to your root directory

## Step 2: Add Facebook API

Open

1. /content/themes/default/templates/invite/**invite.tpl**
2. /content/themes/default/templates/invite/**invitepage.tpl**
3. /content/themes/default/templates/invite/**invitegroup.tpl**
4. /content/themes/default/templates/invite/**invite\_event.tpl**

and add your facebook app id replacing the text YOUR-APP-ID (**around line 27**)

this is important for the facebook mobile sharing to work

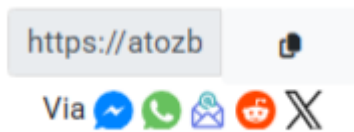

```
<a href="https://www.facebook.com/dialog/send?link={$system['system_url']}/{$user-  
>_data['user_name']}&app_id=YOUR-APP-ID&redirect_uri={$system['system_url']}" target="_blank"  
class="button d-none d-md-block">
```

/content/themes/default/templates/**newsfeed.tpl**

and add wherever you wish to show the block, I have it on my \_sidebar.tpl

```
{include file='invite/invite/invite.tpl'}
```

## Invite Friends to Join

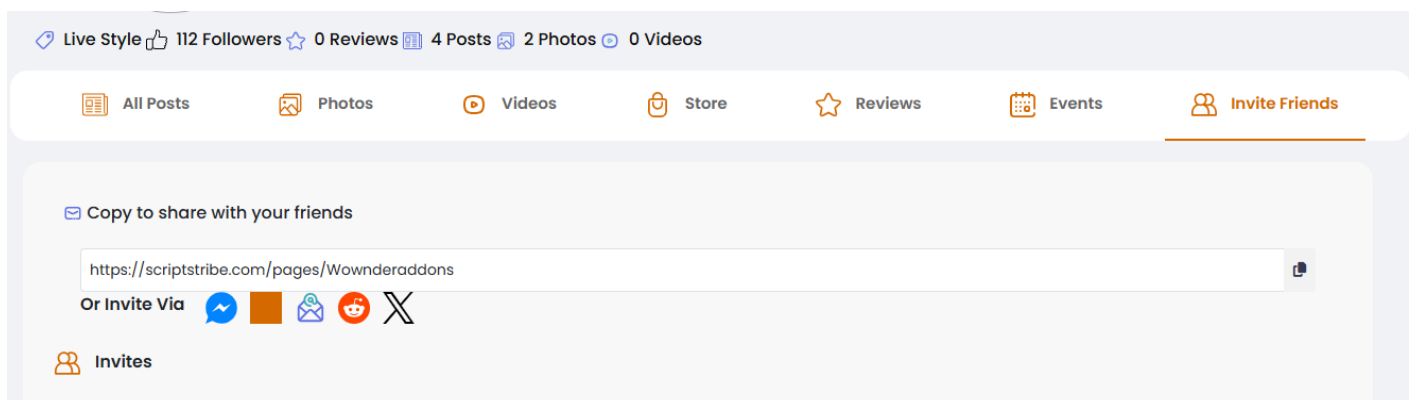

/content/themes/default/templates/**page.tpl**

**and look for**

```
<!-- invite friends -->
{if $page['i_like'] && $page['invites']}
<div class="card">
  <div class="card-header bg-transparent">
    <div class="float-end">
      <small><a href="{ $system['system_url'] }/pages/{ $page['page_name'] }/invites">{_("See
All")}</a></small>
    </div>
```

after that add

```
{include file='invite/invitepage.tpl'}
```

Open /content/themes/default/templates/**\_\_svg\_icons.tpl** and add

```
{elseif $icon == "whatsapp"}

{include file='../images/svg/whatsapp.svg'}

{elseif $icon == "facebookmessenger"}

{include file='../images/svg/facebookmessenger.svg'}
```

Open /content/themes/default/templates/**group.tpl** and look for

```
<div class="card-body">
    <ul>
        {foreach $group['invites'] as $_user}
            {include file='__feeds_user.tpl' _tpl="list" _connection=$_user["connection"] _small=true}
        {/foreach}
    </ul>
```

□□□

And after that add

```
{include file='invite/invitegroups.tpl'}
```

Open /content/themes/default/templates/**event.tpl** and look for

Look for

```
{foreach $event['invites'] as $_user}
    {include file='__feeds_user.tpl' _tpl="list" _connection=$_user["connection"] _small=true}
{/foreach}
</ul>
```

and after that add

```
{include file='invite/invite_event.tpl'}
```

You are done, enjoy
